Professional Summary:

Experienced Data Engineer and Data Analyst with over **8 years** of hands-on experience in building and managing data pipelines, creating reports, and delivering insights to support business decisions. Strong expertise in GCP (BigQuery, Dataproc, Cloud Composer) and Snowflake, with solid experience in SQL development, stored procedure migration, CDC pipelines, and CI/CD automation using Concourse and GitHub. Proficient in data ingestion from heterogeneous RDBMS systems, real-time and batch data processing, and orchestrating scalable ETL workflows.

Core Competencies:

- Designed and implemented **ETL pipelines** using **Bigquery and Dataprep in GCP**, optimizing data flow from multiple sources into **Google Bigquery** for enhanced processing efficiency.
- Developed **complex SQL queries, stored procedures, and views**, applying performance tuning techniques such as indexing and query optimization for large-scale datasets.
- Utilized **Python** to automate **data ingestion, data transformation, and API integrations**, streamlining data workflows and enhancing process automation.
- Developed and deployed interactive **Google Looker Studio dashboards** and reports, leveraging **Bigquery**, and advanced **data modeling techniques**. Implemented **Row-Level Security (RLS)** to control data access at the user level and ensure secure reporting.
- Enhanced **Power BI deployment** with tools like **ALM Toolkit** for version control, dataset management, and efficient deployment across different environments (Development, Test, and Production). Automated deployment processes and improved reporting consistency.
- Applied **data validation, data profiling, and data integrity checks** to ensure high-quality data across all stages of ETL and reporting processes.
- Automated routine data refreshes and report generation through **Scheduled Queries** and **Airflow Dags**, improving operational efficiency and reducing manual tasks.
- Collaborated in **Agile/Scrum** environments, working with cross-functional teams to translate business requirements into technical solutions and deliver end-to-end data products.
- Proficient in **SSMS, Visual Studio, Git, and TFS** for version control, development, and deployment of data solutions.

Technical Skills:

- **Data Engineering:** SQL Server Integration Services (SSIS), ETL Development, Data Pipeline Architecture, Data Warehousing, Data Lake Integration, **Google Bigquery, DataBricks, Cloud Composer**
- **Database Technologies:** Microsoft SQL Server, Snowflake, , Stored Procedures, Views, Indexing, Query Optimization, Data Modeling, Performance Tuning
- **Programming & Scripting:** Python, Data Automation, API Integrations, Data Ingestion, File Handling, Automation Scripts, Pyspark

- **Business Intelligence & Reporting:** Looker Studio (Bigquery, Data Modeling, Custom Visuals), Report Development, KPI Dashboards, Interactive Dashboards, Data Visualization, Data Profiling, RLS (Row-Level Security)
- **Version Control & Deployment:** Github, Team Foundation Server (TFS), ALM Toolkit, Version Control for Looker Studio, Deployment Automation, Source Control Management
- **Data Quality & Validation:** Data Validation, Data Profiling, Data Cleansing, Data Integrity Checks, Quality Assurance (QA), Automated Data Testing
- **Methodologies & Frameworks:** Agile/Scrum, Sprint Planning, Requirement Gathering, Cross-Functional Collaboration
- **Tools & Platforms:** SQL Server Management Studio (SSMS), Visual Studio, **Google Bigquery**, PowerShell, Jupyter Notebooks, GitHub
- **Cloud Technologies:** **GCP (BigQuery, Cloud Storage, Dataproc, Cloud Composer), Snowflake**
- **Workflow Orchestration:** **Apache Airflow (via Cloud Composer), Concourse CI/CD**

Work Experience:

CNA Insurance/Accenture,
Data Engineer / Data Analyst

Nov 2021 – Current

Roles & Responsibilities:

- Designed and implemented **ETL pipelines** using **Google Cloud Composer** and **Google Bigquery** to automate the flow of data from multiple sources into Google **Bigquery** optimizing processing times and improving data accuracy.
- Wrote and optimized and translated **stored procedures**, and **views**, from sql to Bigquery applying performance tuning techniques like **indexing** and **query optimization**, resulting in enhanced query performance and faster report generation.
- Developed and **optimized SQL-based data pipelines**, ensuring efficient **data processing** and integration. Utilized **Looker Studio to create dynamic dashboards** for operational insights and data-driven decision-making.
- Implemented **Data Validation**, **Data Profiling**, and **Data Cleansing** techniques to ensure data integrity and quality across ETL processes, ensuring the accuracy of source-to-target data migration.
- Created and deployed **Looker Studio dashboards**, incorporating **DAX** and **Power Query** to deliver real-time business insights with dynamic data models and KPI visualizations.
- Supported troubleshooting and issue resolution during **SIT**, **UAT**, and **Production** phases, providing timely fixes for data-related issues.
- Participated in **Agile** sprint cycles, gathering requirements, contributing to technical design, and ensuring alignment of solutions with business objectives.
- Developed scalable PySpark-based batch pipelines on GCP Dataproc. -
- Automated ingestion workflows with Cloud Composer.
- Designed real-time CDC pipelines using Striim to ingest data from PostgreSQL, Oracle, and MySQL into BigQuery.

Roles & Responsibilities:

- Engineered and maintained **enterprise-grade ETL pipelines** using **Bigquery** and **GCP** to automate data ingestion, transformation, and delivery across multiple logistics and warehouse management systems.
- Designed complex **SQL scripts**, **stored procedures**, **indexed views**, and **partitioned tables** to optimize query performance and support real-time reporting and analytics.
- Developed and scheduled automated ingestion workflows using **Python** for FTP/SFTP data pulls, JSON/XML parsing, and batch processing, integrating seamlessly into broader ETL pipelines.
- Built **Looker Studio** dashboards and semantic data models **composite models**, and **parameterized reports**, delivering executive-level logistics insights and supporting SLA compliance.
- Implemented **Row-Level Security (RLS)** and used **ALM Toolkit** to manage **Power BI** dataset versioning, branching, and controlled deployments between development, UAT, and production environments.
- Utilized **Google Cloud Storage** and **Bigquery** for staging large logistics files and archival of raw and processed data, enabling scalable storage and retrieval for downstream analytics.
- Performed advanced **data profiling** and **data quality checks** using SQL, Looker Studio, and Python to ensure integrity and consistency in freight, inventory, and customer transaction data.
- Collaborated with solution architects to migrate legacy batch ETL jobs to **Google Cloud Storage** and **Bigquery**, modernizing the data integration stack and improving run-time efficiency.
- Followed **Agile/Scrum** practices, delivering sprint-based deliverables, attending daily stand-ups, and aligning development with rapidly evolving logistics and transportation business requirements.

Education Details:

- **Sri Vidyanikethan Engineering College 2017**
